HCI - Assignment 02
Name: Yash Raj
Roll-no: 24k-0737
Section: BCS-5H

Question #1:-

part (a):- The HCI - Concept here is frequency of use. It means that the options people use most often are given more importance in the interface. While less frequently used options are placed in a secondary menu.

part (b):-
The main reason is to help users perform common tasks quickly & easily. Most people use options like withdrawing cash most often than changing their pin. By placing these options on the main screen, user don't have to search through different menus. It also keeps the screen simple & organized.

part (c) :- (i) Learnability:- New users can easily understand the main screen, while the other options are still available in the clear vision. They can learn how to use the ATM without much difficulty.

Roll no: 24k-0737 Date: 10/10/25

(ii) Flexibility: User can access common operation directly from the main screen, while the other options are still available in the secondary menus. This gives users different ways to access the services they need.

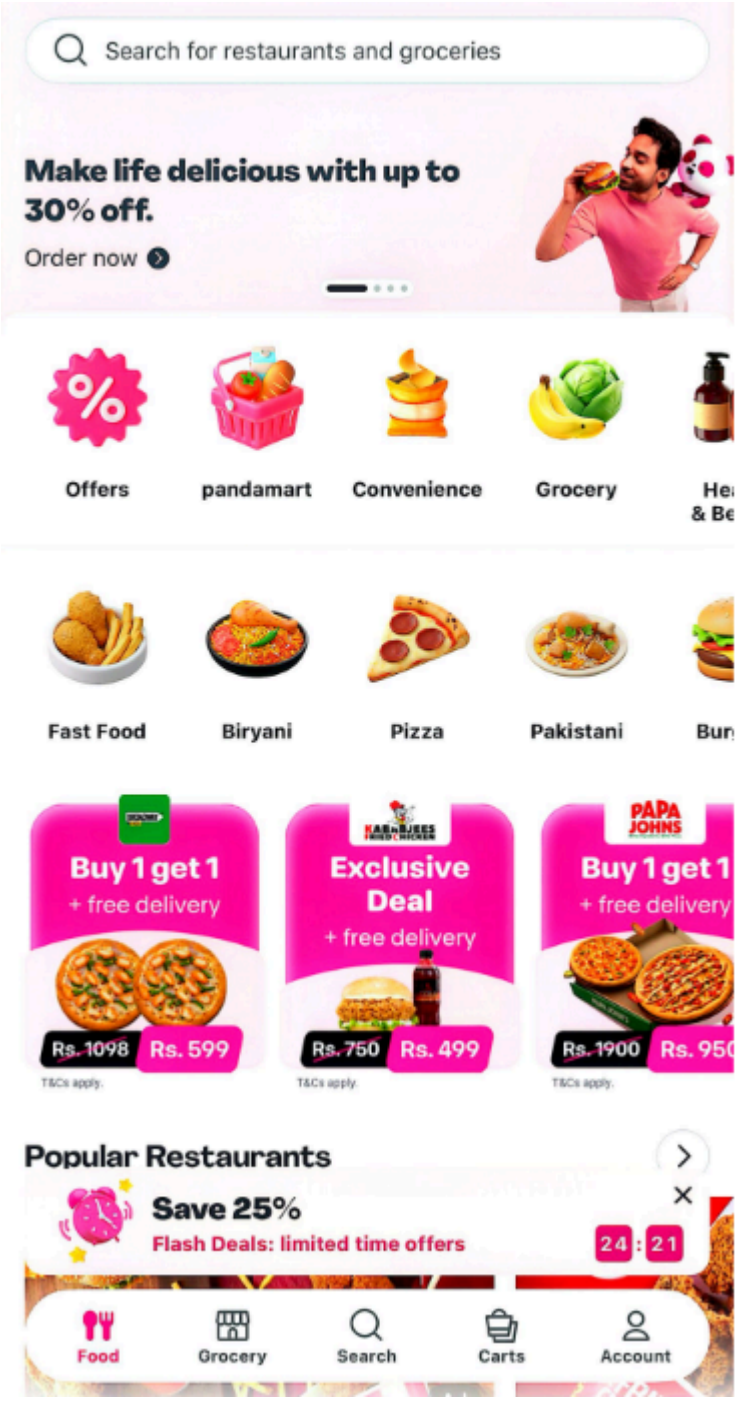

(iii) Ergonomics: A simple & organized screen helps users find the correct option & more easily & reduces the chances of selecting the wrong operation. This makes the ATM easier & more reliable.

Question #2:

part (a): Screenshot attached

→ four usability problems in the ordering:

1- Apply Coupon button is difficult to find.
problem: The coupon option is hidden or poorly-positioned
Violated principle: Visibility of System status

2- Place order button is too small & confused with black.
problem: User may tap the wrong button.
Violated principle: Fitts' law & Error prevention.

3- No Clear Order Confirmation:
problem: After tapping "place-order", user don't know whether the order was successfully submitted.
Violated-principle: Visibility of system-status.

4- Delivery address form is difficult to complete.
problem: Input-fields are difficult to select, read or fill on a mobile-screen.
violated-principle: Ergonomics, Consistency & Error-prevention

Part(b):

Research Article 5) "What affect mobile food ordering app usage?"

Key findings:-

The study found that a simple, clear, & well Organized checkout process with visible discount options & a prominent order button - significantly increase user satisf

How it relates:-

This finding directly relates to the problem we observed:-

(i) If the "Apply-Coupon" option is not visible or easy to find then user may miss it.

(ii) A small or poorly designed "Place-Order" button creates confusion & increase the chance of errors, especially on mobile screens

(iii) Lack of clear confirmation creates confusion & increase the chance of uncertainty.

(iv) A difficult address form increase friction & can lead to incomplete or incorrect order.

Question part(c):

Problem 1: Apply Coupon button is difficult to find

Design Improvements

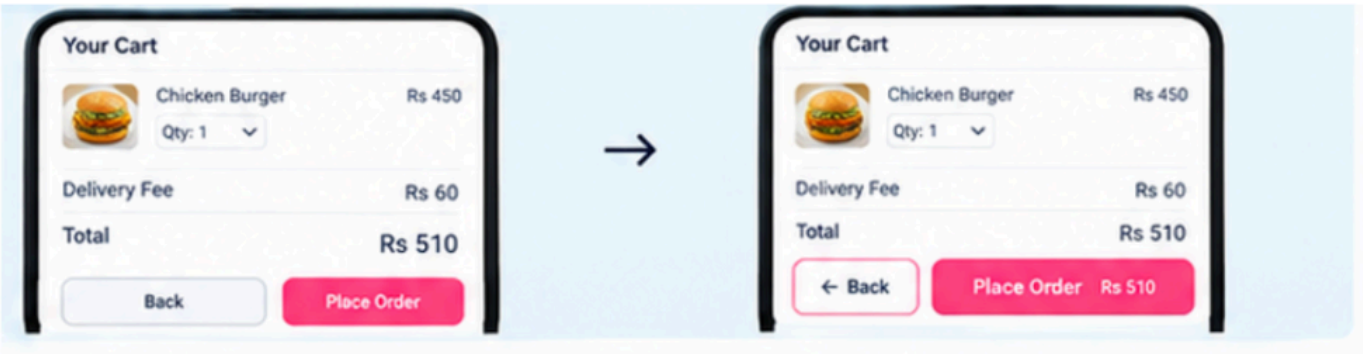

1. ***Place the "Apply Coupon" option in a clearly visible section below the order summary (grouping and alignment).***
2. ***Use a clear button style and icon (ticket icon) to make it look clickable and noticeable (affordance).***

Problem 2: Place Order button is too small and confused with Back

Design Improvements

1. ***Make the "Place Order" button larger, full-width and visually distinct (color, size, shape).***
2. ***Keep the "Back" button separate and clearly labeled with an icon and text (consistency and alignment).***

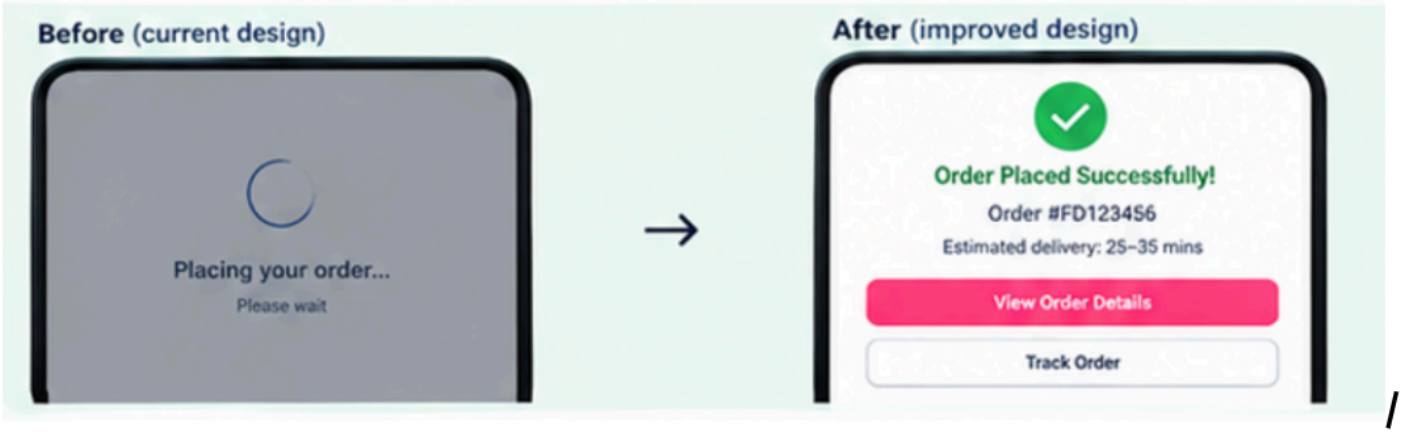

Name: Yash Raj
Roll-no: 24k-0737

Question part(c):

Problem 3: No clear order confirmation

Design Improvements (2)

1. ***Show a confirmation screen immediately after placing the order (success message, order number, and tracking option).***
2. ***Use a clear visual (checkmark icon) and consistent messaging (feedback).***

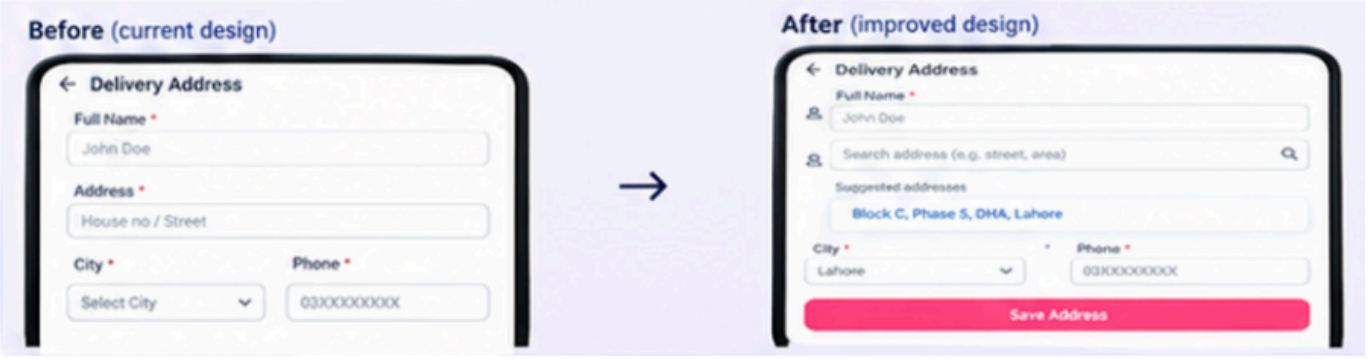

/

Problem 4: Delivery address form is difficult to complete

Design Improvements

1. ***Use larger input fields, better spacing, and clear labels (ergonomics and readability).***
2. ***Add address suggestions and appropriate keyboards, with real-time validation (error prevention).***

part (c) :- SS - attached / Done on Word.

Question #3:

part (a):

Ans: User-focus means designing a system according to user's needs, goals, abilities & limitations.

- Skipping user research is a serious mistake because student, teacher & admin-staff have different requirements. Without research, the design team may make incorrect assumptions & create a portal that is difficult to use.

Ans.

part (b):- Two persona:

Persona 1:- Yash Raj - Student
→ University - student
→ Goals: Registration, grades check, fee payment
→ Frustrations: Confusing Navigation, too many steps
→ Design-Requirement: Responsive mobile interface, clear-navigation, payment confirmation.

Person 2:- Professor-Ghuffran Ahmed
→ Has years of teaching experience.
→ Goals: Upload marks, material sharing, attendance
→ Frustrations: Slow uploads, complicated menus, & unclear instructions.
→ Design-Requirement: Large readable text, simple forms, confirmation messages.

part(c).

Cultural-probe:- A cultural-probe collects information about user's daily lives, habits, & experiences.

(i) User-diary:- User record their portal activities, difficulties & frustations. This helps identify common problems & understand user habits.

(ii) Photo-diary:- User take pictures of their work environment & devices. This helps identify device limitations & design a portal suitable for different users & situations.

part(d):

Iterative-Design:- It involves repeatedly designing, testing, & improving a system.

Prototyping:- It means creating an early model to test the design before full development.

Eg:- (i) Course-Registration:-

problem: Students struggle to find courses & understand pre-req.

Improvement: Make the search bar visible & display pre-req.

(ii) Marks Upload:

problem: Teachers struggle to select classes & identify missing marks.

Improvement: Add a clear Course-selector, spreadsheet style.

Therefore Both ID & prototyping help ensure Edu Connect.

part(e):

Wizard of Oz technique: It is a usability testing method in which user interact with a system that appears automated, while a human secretly performs some functions behind the scenes.

Ex:- "Register-Course" in Edu-Connect

Benefits:
- Test Navigation & screen layouts before full development
- Identifies confusing steps early
- Saves development time & cost.
- Collects early user feedback.

Limitation:- It can't fully test actual backend functionality, payment security or system performance.

part(f):- Golden Rule:

1- Strive for Consistency:- Use consistent layouts, colors & buttons
Ex:- Keep the "Submit" button in same position for all pages.

2- Offer informative feedback:- provide clear response to user actions
Ex:- Display payment successful.

3- Prevent Errors:- Identify mistake before submitting.
Ex:- Warn teachers about missing marks before submitting.

4- Reduce short term memory load:- Keep imp info visible
Ex:- Display selected courses, credit hrs etc.
