Hiring Manager

National University of Computer and Emerging Sciences (FAST)

Islamabad, Pakistan

Subject: Application for Software Engineer Position

Dear Hiring Manager,

I am writing to apply for the **Software Engineer** position at the National University of Computer and Emerging Sciences (FAST). With over one year of software development experience and a Bachelor of Science in Computer Science from FAST-NUCES, I am interested in contributing my experience in enterprise web application development, backend engineering, database integration, and software development practices to your team.

My experience closely aligns with the technical requirements of this position. I have worked with **C#, ASP.NET MVC, .NET Framework, ASP.NET Web API, JavaScript, and Oracle Database**, developing and maintaining web-based applications and RESTful Web APIs. My work has involved implementing MVC-based components, developing modular application functionality, working with SQL queries and stored procedures, integrating databases, troubleshooting technical issues, and testing and debugging applications.

I also have experience applying **object-oriented programming, software design, Agile development practices, code reviews, version control, and structured testing and debugging** throughout the software development process. I am comfortable collaborating with different team members, discussing requirements, resolving technical issues, and working on application improvements while maintaining code quality and reliability.

In addition to my professional experience, my academic background in Computer Science has provided me with a strong foundation in **software design, object-oriented programming, data structures and algorithms, computer networks, and software development**. Through my projects, I have further developed practical experience in backend APIs, authentication, validation, database integration, and maintainable software architecture.

I would welcome the opportunity to contribute to FAST and work with a team focused on developing reliable software solutions. Thank you for considering my application. I would appreciate the opportunity to discuss how my technical background and software development experience align with the Software Engineer position.

Sincerely,

Yash Raj
